P.8

If you're looking for a simpler way to create line-of-business applications, check out our unique JavaScript controls.

P.8

If you need controls optimized for touch with unmatched performance across tablets and desktops, see what we offer for WinRT.

P.14

If you're close to a deadline, need help designing the perfect UI, or would like a complete application built just for you, contact Solution Services and let our developers help you reach your goals.

What we mean by 360° transformation

We use the word *transformation* often when we speak of our products. It's because we truly feel our offering is so vast, so dynamic, and so game-changing that it reaches into the heart of an application and brings out all it is meant to be. How many occasions have you thought your app could do more, if only you had the time? Now you do.

Our time is your time

Each quarter Syncfusion on average invests more than 50,000 hours in developing components. That's a mass of development power. It's a lot of time you'll save. And you *know* what time is.

THE SYNCFUSION ADVANTAGE

Because time is money,
and lacking either is just a headache.

Your development partner: With Syncfusion, you're not alone in the development cycle. We're there too with unmatched phone and online support. Our Direct-Trac support system is available 24-7, providing you easy access to the current status of an incident. Each license includes a one-year subscription and product updates—and unlike other vendors, we don't charge extra for phone support.

Built with the future in mind: Our products are geared toward long-lifecycle applications and are built to meet high standards for flexibility and maintainability. We provide comprehensive support for the latest technologies, including .NET 4.5, Visual Studio 2013, Windows 8.1, HTML 5, and jQuery to name a few.

Full source code: When cofounder Stefan Hoenig first started providing source code with products, little did he know he was establishing a standard for the entire industry. From the beginning, we've always believed in empowering developers. Our source code is redistributed and shipped in a tightly integrated manner—use our components in debug mode at the flick of a switch.

Straightforward, flexible licensing: Syncfusion components are licensed on a simple per-developer basis with no royalties, runtime, or server deployment fees. Each licensed developer may install on multiple personal machines.

A viable base for standardization: The wide range of solid products in our suites allows our customers to reduce their dependence on multiple vendors and streamline their toolkits.

In the words of our customers

“

Syncfusion helps us achieve our aggressive development timescales and provides excellent support when we need it. Our key business users at a top global bank were actually speechless when they saw the level of functionality that we have created over the past few months with Syncfusion.”

Rohan Bethune
Hatstand Limited

“

With any vendor-based API there will always be a learning curve. It is clear that Syncfusion has invested heavily in creating a well-established, pivotal support center of excellence. Without Syncfusion's solid support infrastructure, we would not have been able to achieve our targets, and more importantly, would not be able to keep our users happy.”

Mark Mathews
Lucid Information Technologies

“

We use Syncfusion components for ASP.NET web applications and CLR procedures. We have used XlsIO extensively to import data from Excel sheets into SQL Server databases, as well as many of [Syncfusion's] .NET components. In XlsIO, we imported complex workbooks with multiple pages and computations; it has worked very well for us.”

Allyson Mendieta
ApexTech

“

Syncfusion controls were the easiest to use and the support was great. Syncfusion controls have greatly reduced the development time by allowing me to concentrate on functionality without worrying about the look and feel of the application.”

Brian Hublein
Cyberlogic

What you need to know about our studios

Essential Studio Enterprise Edition

If you need it all, and want to do it all, then Essential Studio Enterprise Edition is all you could want. This comprehensive suite of components and controls is composed of all the user interface, business intelligence, and reporting tools and libraries that we offer.

It's the one package you need to develop across every platform—WinRT, JavaScript, ASP.NET, ASP.NET MVC, WPF, Silverlight, LightSwitch, Windows Phone, and Windows Forms.

Essential Studio for JavaScript

Essential Studio for JavaScript is a package of 70 controls designed for enterprise. It includes the only JavaScript-based OLAP grid on the market, a highly interactive chart control, and a data source control for working with remote and local data. Build line-of-business applications for analyzing business intelligence data, charting complex financial statistics, and managing information in feature-rich grids. Each control is suitable for the web and mobile devices.

Essential Studio for WinRT

Essential Studio for WinRT contains all the controls you need to build line of business applications. It contains over 40 controls. 30 for universal apps including the fastest grid and chart on the market. A unique set of libraries is included to generate Excel, Word, and PDF documents from WinRT apps.

Essential Studio for ASP.NET WebForms

Including grids, charts, gauges, menus, editors, and much more. It also comes with high-performance libraries that enable your applications to read and write Excel, Word, and PDF documents.

Essential Studio for ASP.NET MVC

Our very first natively written MVC control suite contains over 70 unique controls essential for assembling enterprise-grade web applications. It has been enhanced with client-side JavaScript controls, and includes grids, charts, gauges, menus, calendars, editors, and much more. It comes with high-performance libraries that enable your applications to read and write Excel, Word, and PDF documents. You will also find several one-of-a-kind MVC controls like OlapClient, PDF Viewer, and Report Viewer.

Essential Studio for WPF

Essential Studio for WPF contains over 100 unique controls for building analytical and performance-intensive Windows applications—including grids, charts, gauges, menus, calendars, editors, and much more. Our file-format libraries also allow you to export to, and work with, Excel, Word, and PDF files.

Essential Studio for Windows Phone

Essential Studio for Windows Phone contains 40 unique universal controls you need to build line-of-business, native mobile applications—including charts, gauges, maps, editors, and much more.

Essential Studio for Silverlight

Essential Studio for Silverlight contains over 100 controls you need to build rich, analytical, line-of-business web applications—including grids, charts, gauges, menus, calendars, editors, and much more. It even has a native Silverlight version of our file-formatting libraries, which work with Excel, Word, and PDF documents. It also features exclusive controls for analyzing OLAP data and viewing RDL reports.

Essential Studio for LightSwitch

Essential Studio for LightSwitch is a useful collection of over 15 control extensions for the LightSwitch framework. These extensions can be used to create feature-rich data grids, charts, maps, gauges, and more, exclusively in Essential Studio for Silverlight. OLAP controls allow users to easily visualize and interact with BI data.

Essential Studio for Windows Forms

Essential Studio for Windows Forms contains all the controls you need to build high-performance Windows applications—including grids, charts, gauges, menus, calendars, editors, and much more. In the works for more than a decade, it has the widest set of controls available for Windows Forms. It also includes unique controls that enable your applications to read and write Excel, Word, and PDF documents.

Let's introduce you to our products

Essential Studio for JavaScript

70 client-side controls designed from the ground up for enterprise applications.

OLAP Grid	Analyze business intelligence data on the web with the only JavaScript OLAP grid on the market.
Charts	Create diverse charts with multiple axes, customizable data symbols, and exceptional user interactivity.
Gauges	Linear, radial, and digital gauges for displaying alphanumeric information.
Grid	Manage large data sets with filtering, grouping, paging, sorting, and more.
Data Source	Unique control for working with local and remote data.
Tree View	Present hierarchical data with customizable icons, check boxes, and more.
Autocomplete	Make data entry easier for end users and capture data more reliably.
Date Picker	Simple, intuitive calendar window that enables users to select dates.
Diagram	Create custom diagrams by positioning shapes using built-in layouts or building them from scratch.
Gantt	Schedule and manage projects in this Microsoft Project-like viewer and editor.
Schedule	Manage appointments with numerous features, including time zone settings, view customization, and localization.

Essential Studio for WinRT

Get ready for WinRT with 55 unique controls including the fastest grid and chart on the market.

Grid	Built for providing the best performance, this data-bound grid can be bound to hundreds of thousands of records.
Charts and Gauges	Uses DirectX rendering to provide the best performance with support for all common chart types and several gauges.
Diagram	Interactively design diagrams as well as dynamically build workflows and hierarchies from data.
File Format Libraries	Native libraries to generate PDF, Excel, and Word documents on the fly.
Reports	RDL report viewer with the ability to export reports to several formats.
Maps	Build great reports with heat and bubble maps quickly and easily with built-in shapefiles and data binding.
Editors	Rich-text editor, native type editors, sliders, etc., allow you to create intuitive data input forms.
Navigation	Hub tiles, carousel, tile view, accordion, and all other mobile-specific navigation paradigms are supported.

Essential Studio for ASP.NET

Enterprise-class library with 40 unique controls and components.

Grid	Powerful data grid with support for hierarchies, grouping, filtering, paging, and built-in editing.
Chart	High-performance charting component with 35 chart types, including financial charts.
Diagram	Build static, data-bound diagrams as well as Microsoft Visio-like interactive diagrams.
File Format Libraries	Libraries for working with Excel, PDF, and Word documents. Also includes a PDF viewer.
Business Intelligence	Controls for visualizing OLAP data in an interactive slice-and-dice interface.
Schedule	Outlook-like scheduler control.
Navigation	Office ribbon, accordion, tree view, gallery, tab strip, etc.
Editors	Rich-text editor, autocomplete, numeric and date-time editors, CAPTCHA, etc.
Reports	Server-based RDL processing library to generate reports in PDF, Word, Excel, etc.
Layout	Window, dialog, docking, and splitter components.

Essential Studio for ASP.NET MVC

More than 70 unique controls and libraries for building line-of-business and mobile web applications.

Grid	Lightweight, high-performance data grid with support for hierarchies, grouping, etc. Capable of handling millions of records.
Charts and Gauges	Visually stunning HTML 5 chart component with 35 chart types and unlimited data-point support.
Diagram	HTML 5-compatible diagramming component with Visio-like interactive capabilities.
File Format Libraries	High-performance libraries for working with Excel, PDF, and Word documents. There's even a PDF viewer.
Business Intelligence	High-performance, interactive component for analyzing and reporting OLAP data.
Reports	Server-based RDL processing library to generate reports in PDF, Word, Excel, etc., and features a native MVC RDL report viewer with several export options.
Schedule	Microsoft Outlook-style scheduling controls with built-in data-binding support.
Navigation	Office-style ribbon, tree, accordion, menu, tab, gallery view, etc.
Editors	Rich-text editor, date and time pickers, autocomplete, sliders, drop-down buttons, CAPTCHA, etc.

Essential Studio for WPF

Comprehensive set of 115 WPF controls and libraries to help you create rich, performance-intensive Windows applications.

Grid	Data-bound grid with unmatched performance, one-of-a-kind Excel-like, cell-oriented grid and tree grids.
Charts and Gauges	High-performance charts with 37 chart types, as well as timeline, heat map, and sparkline support.
Business Intelligence	Controls for performing slice-and-dice analysis of OLAP and relational data, as well as building BI dashboards.
File Format Libraries	Native WPF libraries to create and edit Excel, PDF, and Word documents, including a PDF viewer component.
Reports	RDL report designer and report viewer components, along with an RDL processing library, allow you to put together a complete custom reporting solution.
Spreadsheet	The only way to view and edit Excel files within your apps in a rich, Office-like UI.
Diagram	Create Microsoft Visio-like diagram building applications as well as dynamic, data-driven flow charts and hierarchies.
Maps	Map control with support for layers, zooming, etc., that enables you to source maps from Bing or ESRI shapefiles.
Schedule	Microsoft Outlook-like scheduling control with support for templates, MVVM, themes, etc.
Gantt	Microsoft Project-like viewer and editor control to schedule and manage projects.
Editors	Autocomplete, native type editors, combo boxes, drop-down buttons, rich-text editor, etc.
Navigation	Build Office or VS.NET-like user interfaces with our ribbon, docking, tabbed MDI, and other frameworks.
Syntax Editor	Powerful code editor component with support for syntax highlighting, IntelliSense, undo, redo, etc.

Essential Studio for Windows Phone

40 unique controls for building line-of-business mobile apps.

DataGrid	A touch-optimized grid control that has a rich feature set including sorting, filtering, and grouping.
Charts and Gauges	High-performance chart control with 28 unique chart types and a rich set of digital, radial, and linear gauges.
Editors	Native type editors, sliders, and pickers with the Windows Phone look and feel.
Navigation	Hub tile, tile view, carousel, tree, and more controls for building sleek mobile navigation UI.

Essential Studio for Silverlight

Set of 105 controls and LightSwitch extensions to help you build rich, high-performance web-based applications.

Grid	Data-bound grid with unmatched performance, one-of-a-kind Excel-like, cell-oriented grid and tree grids.
Charts and Gauges	High-performance charting components with 35 chart types, as well as heat maps and sparklines.
Business Intelligence	Controls for performing slice-and-dice analysis of OLAP and relational data, as well as building BI dashboards.
File Format Libraries	Native WPF libraries to create and edit Excel, PDF, and Word documents.
Reports	RDL report viewer component to help you build rich reporting dashboards.
Spreadsheet	The only way to view and edit Excel files within your apps in a rich, Office-like UI.
Diagram	Create Microsoft Visio-like diagram building applications as well as dynamic, data-driven flow charts and hierarchies.
Maps	Map control with support for layers, zooming, etc., that enables you to source maps from Bing or ESRI shapefiles.
Schedule	Microsoft Outlook-like scheduling control with support for templates, MVVM, themes, etc.
Gantt	Microsoft Project-like viewer and editor control to schedule and manage projects.
Editors	Autocomplete, native type editors, combo boxes, drop-down buttons, rich-text editor, etc.
Navigation	Build Office or VS.NET-like user interfaces with our ribbon, docking, tabbed MDI, and other frameworks.
LightSwitch Extensions	Feature-rich extensions including data grids, charts, maps, gauge editors, and more.

Essential Studio for Windows Forms

Comprehensive suite of 120 unique controls to build high-performance, enterprise-grade Windows Forms applications.

Grid	Our flagship Excel-like, cell-oriented grid control, and a high-performance data-bound grid.
Charts	Visually stunning and easy-to-use charts with 35 chart types, including sparklines, and a powerful data model.
Diagram	Full-fledged Visio-like diagram building component that is also capable of dynamically generating workflows, flowcharts, hierarchies, and more.
File Format Libraries	High-performance libraries to create and edit PDF, Excel, Word, and other documents. Also features a PDF viewer component.
Business Intelligence	Suite of controls to help you build slice-and-dice analysis for OLAP and relational data.
Schedule	Microsoft Outlook-style control for adding rich scheduling capabilities to your applications.
Editors	Widest set of editors you will find anywhere, from autocomplete to rich drop-down menus.
Navigation	Build Office or VS.NET-like user interfaces with our ribbon, docking, tabbed MDI, tree, tab, and other controls and frameworks.
Notification	Tooltips, progress bars, status bars, splash panels, etc.
Syntax Editor	Powerful code editor component with support for syntax highlighting, IntelliSense, undo, redo, and more.
Map	Powerful data-visualization control that can be used to articulate data as a map.

The one package you need for developing ASP.NET MVC, ASP.NET, WPF, WinRT, Windows Phone, Windows Forms, and Silverlight applications, including HTML 5 and JavaScript for mobile and desktop.

Essential Studio Enterprise Edition

The whole package, allowing you to pull all your components from one place.

Developer-to-developer support

The people who write the controls support the controls. Their knowledge is yours.

Vast offering

Over 600 controls; that's more than 8,000,000 lines of code!

Orubase

Accelerate cross-platform enterprise mobile application development by leveraging the full power of HTML 5, JavaScript, and .NET without compromising end-user experience.

- End-to-end mobile solution for Android, iOS, and Windows Phone.
- Reuse your .NET development skills and code.
- Build high-performance websites and applications that look and feel like native mobile apps.
- Innovative hybrid approach with complete access to device hardware.
- Enhanced security for your application logic and data.
- Rich user experience across smartphones and tablets.

Did you know Syncfusion offers custom solutions?

As a leading provider of .NET components and JavaScript libraries, we are uniquely positioned to leverage our extensive collection of software frameworks and deliver custom solutions in as little as 20% of the time traditionally required. We leverage our expertise on the Microsoft platform to deliver solutions faster and for a lower cost.

Syncfusion Solution Services is:

- A powerful solution that will turn your data into actionable metrics.
- Built upon our existing, dependable solution frameworks.
- Massive savings and predictable results.
- Built on a proven, reliable platform with thousands of users over more than 10 years.

Custom solutions are available for data visualization, enterprise reporting, enterprise mobility, and business intelligence applications. Syncfusion can even create hybrid mobile applications that visualize your data with stunning clarity using our Orubase framework, making it easier than ever before to monitor key information from anywhere in the world.

Contact our Solution Services or visit www.syncfusion.com/solutions to learn more.

Moving forward

We don't sell a lot of our products based on gusto or showmanship. We find it's more effective to simply sell on facts spelled out in black and white. So, here they are:

- Syncfusion has over 600 discrete .NET controls and JavaScript libraries.
- Our .NET offering represents over 50,000 development hours each quarter.
- Our response time to an incident is less than 24 hours.
- We've also collected over 4,000 use-case samples you can access.
- We've written over 8,000,000 lines of code for our products, and we're writing even more.

Let's get a relationship started

We'd like the opportunity to prove ourselves to you. After that, you be the judge.
Here's how to get things started.

1. **Download our evaluation**—Go to www.syncfusion.com/evaluation for a fully functional, 30-day trial of all our studios.
2. **Utilize our support during the trial**—All trials come with full support. Please call on our support staff to help you during the evaluation.
3. **Review our use-case samples**—To give you ideas and solutions, we've collected hundreds of samples you can implement in your product.
4. **Schedule an online demo**—Once you're familiar with our product and have worked with our samples, you'll have more detailed questions concerning what else our products can do. Set up a demo with one of our engineers so we can show you.
5. **Talk to an account manager**—Before the evaluation expires, contact your dedicated account manager. This is the person responsible for meeting your project requirements and helping you achieve your business goals.

We'd love to hear from you

**Download your free, fully functional 30-day evaluation
