

## Essential Grid

For more than 10 years, Syncfusion has provided user interface solutions for financial institutions. Syncfusion's Essential Grid is a fully customizable, industry-standard, high-performance control. With an extensive Excel-like feature set and outstanding performance, it supports extremely detailed customization down to the cell level.

### Platforms Supported:

- ASP.NET
- ASP.NET MVC
- Windows Forms
- WPF
- Silverlight
- Mobile MVC

Essential Grid comprises three unique grids:

- An extensible data-bound GridData control
- A powerful cell-oriented Grid control
- A multi-column GridTree control.

### Features:

**Virtualization**—Essential Grid provides an instant scrolling experience, displaying millions of records and handling real-time data updates with less CPU usage. It guarantees very low latency when scrolling or expanding due to a highly responsive UI.

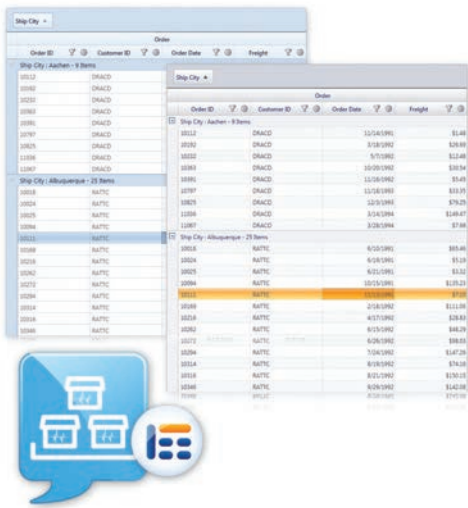

**Refresh Speeds**—By reducing the amount of time you spend grouping multiple categories of data, and optimizing the performance of grouping individual columns, you can perform thousands of updates per second that will only show as instantaneous refreshes on-screen.

# Essential Grid

**“We use Syncfusion Essential Grid for Windows Forms for a trading application. Specifically, we are using the virtual grid, which allows us to load a small portion of data into the GUI. The grid is very flexible, and very fast.”**

**Vladimir K, USA**

**Multi-Core Aware**—Our products are designed to exact high-performance from the latest, most improved hardware. This means real-time processing of large amounts of data at a rate never seen before.

**Native Implementation**—Harness the power of your .NET platform to build a robust, high-performance control. A native implementation is the only way to ensure fast and smooth visualization.
