I am using Syncfusion's tools now for 7 years. After my change to AUDI AG I convinced my boss of buying the essential studio. Today I am using it to create software tools around the AUDI engine test benches. I believe that in the .Net area Syncfusion has one of the most powerful solutions for creating software. Syncfusion's Essential Suite helps me to reduce development time, to standardize software and to offer a modern and common GUI to the user for an outstanding price. If someone is looking for a tool which can assist you in that way, I would recommend Syncfusion.

We looked at several different diagram packages but ultimately went with Syncfusion. Their object library is very straight-forward and their help files are terrific. Highly recommended.

**Anonymous 14-Dec-2010 Review: ★★★★★**

We recently purchased Syncfusion to provide Word, RTF and PDF exporting within a new .NET application. The product was extremely easy to install and use. A problem was noticed with French characters for the RTF export functionality. I notified Syncfusion who confirmed the issue and promised the fix on a certain day. Incredibly I received an e-mail on the promised day stating that the fix was ready. A quick install and all was good. Fantastic service.

**dgarvin [USA] 21-Aug-2010 Review: ★★★★★**

Great tools. I use the data ground grid extensively, along with many of the windows forms components. Top quality and very flexible. The documentation and samples shipped with the product are first class and very useful. The user forum is current and provides many answers without going to tech support. But, whenever I've gone to tech support with specific issues and questions, they have been extremely responsive and competent. They're always willing to help and do their best to solve the problem to my satisfaction. None of this „works on my machine“ mentality. I highly recommend Syncfusion and all of their products.

We've been using the Syncfusion controls, Essential Studio Enterprise, for many years (since 2004) and we've found them extremely useful – in fact we'll go so far as to say they're Essential! The suite includes controls for Windows Forms, ASP.Net, WPF, Silverlight and other controls that allow you to create native PDF files, Word & Excel Documents and so much more - in fact, it's one of the few suites that gives you all this functionality at such a great price – source code is also available should you need it as well.
