Syncfusion Sponsoring High Performance Computing for Wall Street Conference

Syncfusion components and controls leveraged by application developers in the financial services and commercial banking space

RTP, N.C. – September 15, 2011 – Syncfusion, an enterprise technology provider of .NET components and controls, today announced it is a silver sponsor of the High Performance Computing for Wall Street Conference, which will take place on September 19 at the Roosevelt Hotel in New York City. Syncfusion’s list of customers in the financial services and commercial banking space includes 8 of the top 20 institutions in the Federal Reserve Statistical Release.

Syncfusion Essential Studio Enterprise Edition provides developers with the fastest, high-performance WPF Grid on the market and the most comprehensive suite of components and controls for .NET. As a result, developers can create rich applications, integrate business intelligence analysis and reporting solutions with ease.

Syncfusion executives will be on hand throughout the show at booth 106. The company will be giving away a new technical whitepaper written by Vice President Daniel Jebaraj titled “What You Need to Know When Selecting a Grid.”

Syncfusion Essential Studio Enterprise Edition features include:

- Excel Editor: This full-fledged, secure viewer is geared for both rich-client (WPF) and thin-client (Silverlight) environments, allowing developers to extend Excel-like functionality within an application.
- Virtualization and Refresh Speeds for Grids: Essential Grid provides an instant scrolling experience, displaying millions of records and handling real-time data updates with less CPU usage. The grid can also perform thousands of updates per second that show as instantaneous refreshes on-screen.
- Financial Chart Types: Includes all the major financial charts such as Kagi, Renko, box-and-whisker, and the hi-lo gamut, allowing developers to easily build meaningful, data-driven charts at the flick of a switch.
- Technical Analysis Indicators for Charts: Forecast future movements by running additional formulas on raw data - a great way to predict future market trends and stay ahead of them.

If you are interested in receiving a copy of the technical whitepaper – stop by booth 106 at the show or visit www.syncfusion.com/HPCwhitepaper.

About Syncfusion, Inc.
Syncfusion is the enterprise technology partner for developers on every Microsoft platform, delivering the broadest range of .NET components and controls coupled with a service-oriented approach throughout the entire application lifecycle. Offering the fastest high-performance Silverlight and WPF grid on the market and quarterly product updates, Syncfusion is trusted by developers worldwide for use in mission-critical applications. The company’s flexible licensing and 24/7 support meets the changing needs of enterprises across the globe. Founded in 2001 and headquartered in Research Triangle Park, North Carolina, Syncfusion has more than 7,000 customers including large financial institutions, Fortune 100 companies and global IT consultancies.
