Figure 1 is a bubble chart illustrating the distribution of 1000 incidents across five categories. The x-axis lists the categories: Store Delivery Driver, Store Counter Sales, Back-up Front-End Clerk, Store Dispatcher, and Warehouse Associate. The y-axis represents the count of incidents, ranging from 0 to 1000. The bubble size corresponds to the count, and the bubble color indicates the severity level, with a legend showing 'Severity' (dark blue) and 'Count' (light blue). The 'Store Delivery Driver' category has the highest count (approximately 800 incidents) and is colored dark blue, indicating a higher severity level. The other categories have much lower counts (approximately 100 incidents each) and are colored light blue, indicating a lower severity level.
