Essential DocIO – Document Explorer Utility

Introduction

Document Explorer utility helps to view and modify existing word documents generated using Essential DocIO and MS Word. The documents generated using the following MS word versions are viewable:

- Word 97
- Word 2000
- Word 2002
- Word 2003

It also helps the users to update the contents of the word document and save using Essential DocIO.

Requirements

This utility requires Essential DocIO windows version installed in the machine to run.

Dependent Assemblies (not earlier that v6.2.x.x):

Syncfusion.Compression.Base

Syncfusion.DocIO.Base

Usage

- Document Viewer
To view a file, open it using the File->Open menu. The entire document is now opened and available to be read in the Document Viewer Tab.
- Document Tree
The various elements of the document can be navigated using the Document tree. Each and every element available in the document can be viewed with the help of this tree and new elements such as sections, paragraphs, text could be

added using the context menu of the corresponding parent element that appears on right clicking.

- Document Log
Each and every change in the document content is recorded in the Document Log tab.
- Document Entities
The Document Entities shows the contents of the selected element in the document tree.

How to update a document?

Open the file using File->Open menu. Navigate to the document element to which the content is to be updated. Select the appropriate option from the context menu of the parent element. In case of appending a text, a small dialog box will appear which takes the text to be appended as the input.

Utility source is available in the following location:

{Installed Drive}:\Program Files\Syncfusion\Essential Studio\version number\Utilities\DocIO\Document Explorer

Contacting Syncfusion

Please contact Syncfusion Support by opening a support-incident in our [Direct-Trac](#) system if you encounter any issues.
