

APPLICATION DEVELOPMENT AND MAINTAINENCE – ADM

Today's customers demand applications that deliver hyper-connectivity, extreme personalization, and real-time customizations. These expectations are transforming the application development landscape and, also, how organizations choose their IT partners. With emerging technology trends like — packaged solutions, SMAC (social, mobile, analytics, and cloud) technologies, open source tools and automation, developing pure-play applications is a thing of the past. Organizations want IT partners who can co-create systems and engage with them as strategic business partners to help them enhance business value.

Infosys Application Development practice understands business needs and delivers next-gen applications to meet requirements, enabling the clients to race ahead of the competition. Besides leveraging emerging technologies, we help clients keep pace with new trends and achieve dynamic business objectives such as:

- **Higher and faster business value** with business-driven IT and application development using Infosys Global Agile and DevOps
- **Technology excellence** through automation, continuous delivery, application modernization, and SMAC
- **Enhanced cost optimization** through reduced cost and improved quality with cutting-edge Infosys accelerators and IPs

The Infosys Application Development services help the clients address evolving business and technology challenges by defining, designing and building applications tailored to meet their business
